Vestibular & Balance Disorders

**JACKSON
COUNTY
PHYSICAL
THERAPY, LLC**
Heal Your Body. Strengthen Your Life.™

What are Vestibular Disorders?

The vestibular system is comprised of the inner ear and brain. This system is intimately related to balance, in combination with vision and receptors in your joints. When one or more of these components are not working

properly, you can experience a variety of dizzy symptoms and decreased balance.

Vestibular disorders and balance deficits can be quite common, especially in older adults.

Sign and Symptoms of Vestibular Disorders:

- Dizziness with rolling over in bed or with head and neck movements
- Vertigo • Nausea
- Hearing loss
- Change in vision including tilted field of vision
- Ringing in ears • Imbalance/Falls
- Gaze instability: stationary objects appear to bounce

Common Vestibular Disorders:

- BPPV (Benign Paroxysmal Positional Vertigo)
- Vestibular Neuritis
- Labyrinthitis
- Acoustic neuroma - post resection
- TIA (Transient Ischemic Attack) or CVA (stroke) induced vertigo
- Concussion induced vertigo
- Gaze instability
- Presbystasis (age related balance disorders)
- Cervicogenic dizziness

Vestibular Treatments:

Jackson County Physical Therapy provides one-on-one patient/physical therapist care with personalized treatment based on your specific needs. Your treatment may include:

- Balance exercises
- Canalith repositioning maneuvers – the most common is known as the Epley maneuver
- Visual stabilization exercises
- Fall prevention
- Lower extremity and core strengthening
- Home management techniques
- Habituation exercises

How can physical therapy help?

Physical therapists can provide an accurate diagnosis based on your specific signs and symptoms, perform individualized treatment, and establish a personalized home program. In addition, physical therapists will help retrain your vestibular system to decrease symptoms, improve your balance through exercise, improve your walking ability, teach self-management strategies to avoid falls, and assist you in returning to a full and active life.

How do you know if you are appropriate for physical therapy?

Your doctor may refer you to physical therapy for many reasons related to balance and vestibular dysfunction. If you are experiencing any of the above listed impairments, ask your doctor if physical therapy is right for you. Your JCPT physical therapist will perform a full assessment and prescribe appropriate exercises and techniques to help you reach your goals.
